Precautions No.1:

The final version of the development board is not equipped with the following extension connectors. If you need to use them, please solder the extension connectors or jump wire by yourself.

Precautions No.2:

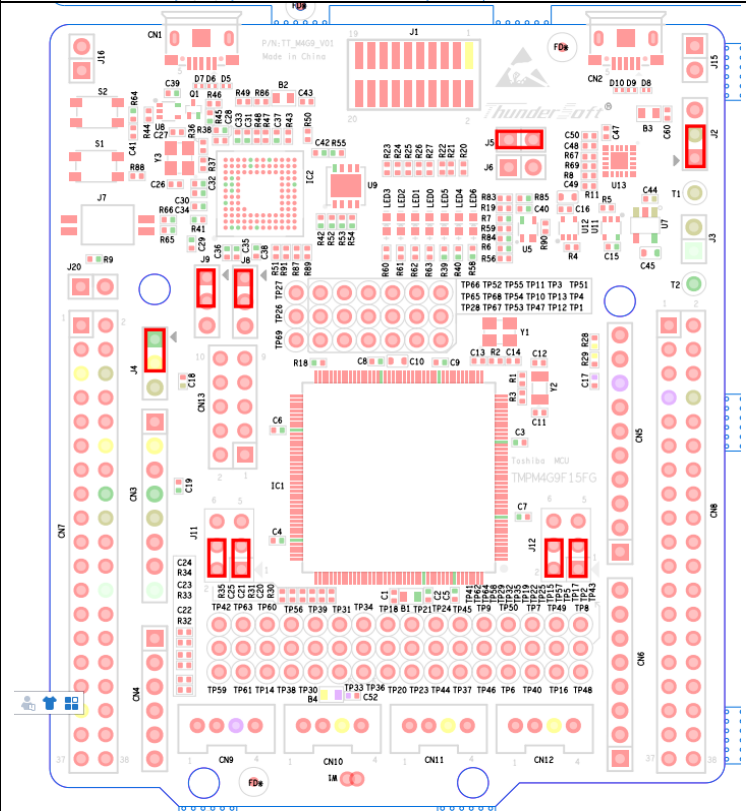

Please confirm that the jumper caps are installed correctly as below before use.

(The jumper caps are installed according to the default state in factory. However, the jumper caps may fall off during use, which may cause the board to fail to start.)

Step2: Compile source code

Developers can compile code in command line tools with the following commands.

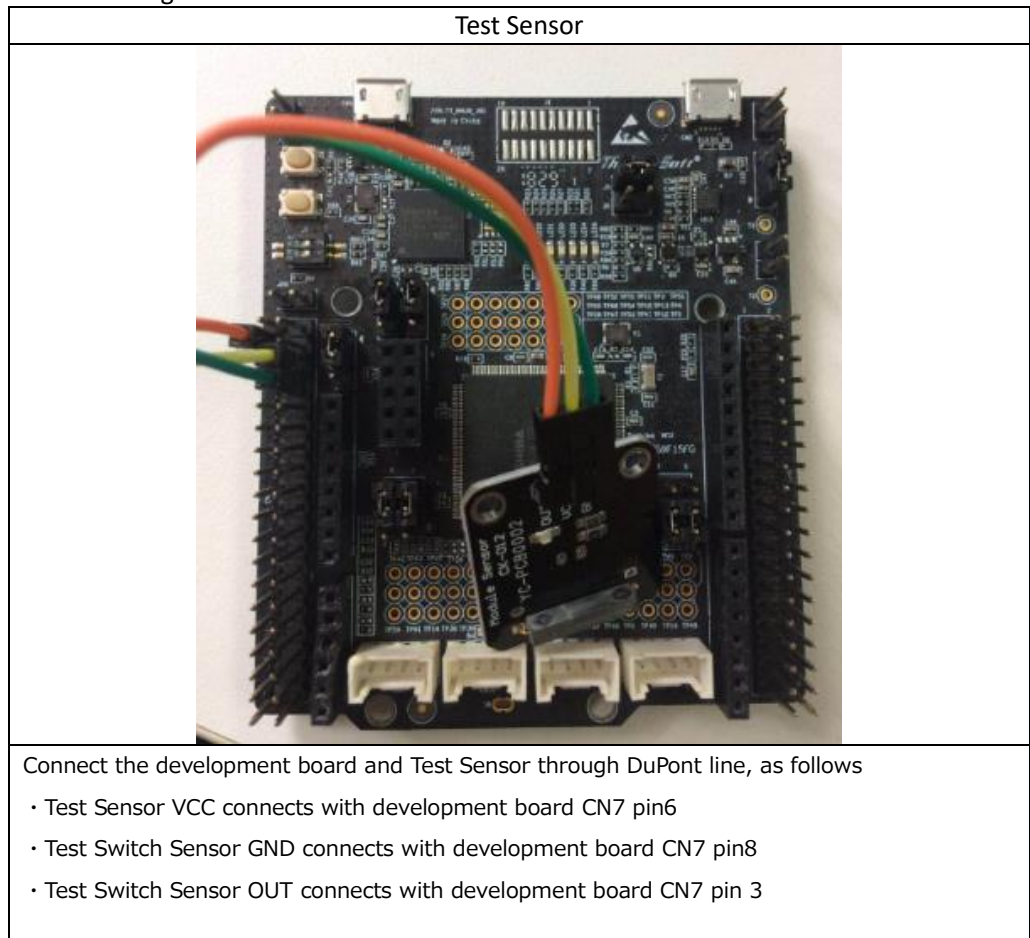

TT_M3HQ	mbed compile -t GCC_ARM -m TT_M3HQ -D TEST_DOOR_STATUS
TT_M4G9	mbed compile -t GCC_ARM -m TT_M4G9 -D TEST_DOOR_STATUS

Step3: Connect development board and Test Sensor.

Step4:Burn .bin file:
After connecting the development board and PC through USB, the following symbols appear.

Then drag and drop (or copy) the .bin file compiled in Step2 to the corresponding symbols.
After the drag and drop (copy) is completed, press the reset key, and the following output will appear.

	<p>LED Output</p> <p>Touch Test Sensor with magnet. LED0 will light for 5 seconds and then shut down.</p>
Output	

The developer can compile and write the program to the development board through IAR / KEIL after getting the code. This article will not introduce the use of IAR and KEIL, so the developer can debug it by himself.
